Operating an IGEB A TF35 Pulse Jet Thermal Fogger

advantages for a pulse-jet thermal fogger: 1. The water which needs more calories to be evaporated, is injected into the resonator at a point of higher temperature and cools down the hot explosion gases to the so-called water steam temperature of an open system = 100°C. The pesticide with a sensitive active

pulsFOG thermal fogging

These fogger utilize a second solution tank and a second set of injection nozzles. The second tank is filled with water which is used to cool the exhaust, allowing for heat-sensitive products to be used. Dramm works closely with the various chemical manufacturers to ensure these products are tested.

PulsFOG® Thermal Foggers - dramm.com

A pulsejet engine (or pulse jet) is a type of jet engine in which combustion occurs in pulses. A pulsejet engine can be made with few [1] or no moving parts . [2] [3] [4] and is capable of running statically (i.e. it does not need to have air forced into its inlet typically by forward motion).
